

jwhois

whois 客户端服务

补充说明

jwhois searches Whois servers for the object on the command line. The host to query is taken from a global configuration file, a configuration file specified on the command line, or selected directly on the command line.

语法

```
jwhois [选项]
```

选项

--version	display version number and patch level
--help	display this help
-v, --verbose	verbose debug output
-c FILE, --config=FILE	use FILE as configuration file
-h HOST, --host=HOST	explicitly query HOST
-n, --no-redirect	disable content redirection
-s, --no-whoisservers	disable whois-servers.net service support
-a, --raw	disable reformatting of the query
-i, --display-redirections	display all redirects instead of hiding them
-p PORT, --port=PORT	use port number PORT (in conjunction with HOST)
-r, --rwhois	force an rwhois query to be made
--rwhois-display=DISPLAY	sets the display option in rwhois queries
--rwhois-limit=LIMIT	sets the maximum number of matches to return
